FOR IMMEDIATE RELEASE

Inline Plastics Corp. announces increased manufacturing capabilities in Georgia and Utah

-- Expanded facilities and increased manufacturing capacity strengthen Inline Plastics' service commitment to its growing base of customers, and supports the launch of new product lines.

Inline Plastics Corp. (Shelton, CT) announces the expansion of its facilities in Salt Lake City, UT and McDonough, GA in response to the continued growth of their innovative food packaging products.

Installation of a new large platform, roll fed thermoforming machine and attendant support equipment was recently completed at the Salt Lake City facility. The new production line, combined with the need for larger facilities to support the company's continued growth, necessitated the addition of 47,000 sq. ft. of space to the facility. The Salt Lake City plant now comprises 156,000 sq. ft. of manufacturing and warehousing space. Several new jobs are being created to support the facility's increased production capacity. Inline plans to produce several extensions to their popular Safe-T-Fresh® product line, as well as new grab-and-go foodservice containers, on the new production line.

Inline's McDonough, GA plant, which opened in 2009, has been instrumental in the company's steady growth in the Southeast. A new large platform thermoforming production line has also been added at the McDonough facility, along with several new jobs. The new line will double the facility's capacity to produce the award winning Safe-T-Fresh® tamper evident line of containers, in addition to several products that are new to the market. The Georgia facility currently consists of a combined 158,000 sq. ft. of manufacturing and warehousing space.

Existing and potential supermarket, foodservice, distributor and processor customers in the Southeast and West will realize several key benefits from the expansion:

- **Shorter lead times:** Reduced lead times and local product inventory will enable customers to carry lower levels of inventory, resulting in increased inventory turns.
- **Increased flexibility on special orders or service situations:** Production and inventory planning is optimized to reflect the specific product needs of each region.
- **Local production capacity/capabilities:** Enables Inline to satisfy increased regional volume demand/spikes as its customers grow their businesses.

“Although headquartered in the Northeast, Inline has enjoyed steady growth in Southeastern and Western states. We are continuing to demonstrate our commitment to those regions by expanding our manufacturing operations and facilities in McDonough, GA and Salt Lake City, UT. From these locations we can more efficiently service our Southeast and Western customer base with significantly shorter lead times and a broad local product offering which includes our popular Safe-T-Fresh® brand of leak resistant, tamper evident / tamper resistant crystal clear PET containers.”
Tom Orkisz – President, Inline Plastics Corp.

About Inline: Inline Plastics Corporation (Shelton, CT), founded in 1968, the owner of the popular SureLock® and Safe-T-Fresh® container brands, is a leading manufacturer of high quality, crystal clear PET clamshell and two-piece packaging. Inline Plastics’ packaging attractively merchandises fresh-cut fruit and vegetables, salads, a variety of grab-and-go foods, baked goods, and deli items. Inline Plastics Corp. also has the most complete line of wash down automated equipment to load, close, and label our containers for more information on the industry leader in tamper resistant containers please visit our website at www.inlineplastics.com or call 1-800-826-5567.
