

FOR IMMEDIATE RELEASE

## **Safe-T-Chef®: Keeping Hot Foods Both Protected and Warm**

### ***First Polypropylene Product Family Brings Tamper-Evidence/Resistance to Hot Food Applications***

**SHELTON, Conn.** – June 1, 2022 –Today, Inline Plastics announced the launch of Safe-T-Chef®, an entirely new product family uniquely designed to add tamper-evident protection while maintaining the temperature of warm and hot foods on the shelf, during third-party deliveries and throughout the preparation and distribution process.

By leveraging the proven patented tamper-evident/tamper-resistant technology the company pioneered in its Safe-T-Fresh® product line, the company's R&D team incorporated that with a different substrate in order to protect and maintain the temperatures of heated foods. Safe-T-Chef is the first polypropylene containers with the company's patented tear-strip technology.

Now, 12 options ranging in shape (rectangular, square and round) and capacity (from 12 to 35 ounce sizes) are available. This combination offers a packaging solution for anything from individual or family-size side dishes, to entrees, or even multi-course meals.

"Take out, third-party delivery, and grab-and-go foods continue to increase in popularity," explained Tom Orkisz, Chairman and CEO of Inline Plastics, "but consumers want the confidence of knowing that throughout all the touchpoints of prepared foods, there is an added layer of security. Safe-T-Chef now offers that for hot applications."

Made with an all-clear, 360°, smooth wall container, Safe-T-Chef is both appealing and user-friendly, allowing consumers to see their foods, eat directly from the containers, and is safe for use in microwaves and dishwashers. The transparent material also eases sorting and processing during recycling.

Safe-T-Chef joins Safe-T-Fresh and Essentials as the third brand in the Inline Plastics portfolio. It will be manufactured exclusively at the company's new facility in Conyers, GA.
