To whom it may concern:

At Inline Plastics Corp. we produce a recyclable single use, thermoformed plastic container, by heating and molding plastic sheets into various shapes and sizes. We require our vendors that supply our only ingredient of PET plastic to be Kosher certified. We send our plastic through a 500-to-600-degree F oven and then it is molded and formed into containers. We do not use any additives, food or animal products in our process. We do not make anything. We only reshape the Kosher plastic into a container.

Sincerely,

Mark Simmons
Corporate Quality & Compliance Manager
Inline Plastics Corp.
