

MADE WITH 10% MASS BALANCED  
RECYCLED PET POST-CONSUMER

*Inline Plastics is proud to announce that our PET has been verified by an independent third-party, SCS Global Services, as made with 10% mass balanced post-consumer recycled PET.*

## Why did we certify the recycled PET content in our products?

Integrity, transparency, and customer satisfaction are defining characteristics of how Inline Plastics does business. This third-party certification strengthens our claim of 10% mass balanced post-consumer recycled material in all our PET products. By showing data behind our claim, we build trust with our customers.

## How were the PET products assessed?

To achieve certification, SCS conducts an independent third-party audit of the organization and the products with recycled content. The audit checks for manufacturing data, processes, chain of custody procedures, material quantification and mass-balance calculations to determine conformance to the Recycled Content Standard.

## Our Commitment

We are dedicated to incorporating post-consumer material into all our PET products. Certification by SCS, as represented by the SCS Kingfisher, is a visual expression of proven commitment to sustainability through environmental stewardship, responsible resource management, and protection of people and communities.
